European Red List — European Environment Agency

It completes its life-cycle only in the Canaries and Madeira, although it may reach western Europe as a vagrant. These include common members of the mallow and daisy families, especially thistles. Genus NYMPHALIS: A small grouping of butterflies occurring in Europe, Asia, and North America.

Endangered species in Europe: facts and figures (infographic)

The males have large black brands on the forewings. There is always a pair of tails on the hindwing.

European Red List — European Environment Agency

In addition, the authors say that grazing animals also help preserve key butterfly habitat. It is estimated that there are only about 2,300 individual Sinai Bation Blue butterflies living in an area measuring 7 square kilometers 2. Almost a third 31% of the butterflies of the continent are known to have a declining population.

How to Save Europe's Threatened Butterflies

Agrodiaetus fulgens occurs only in Catalunya. Sinai Baton Blues were and had not really been thoroughly observed until 2001. The butterfly has disappeared from the European Union countries, but can still be found in Ukraine.

The Case for a Science

The dark cross bands vary in intensity and pattern. They breed on bog plants, including violets. They have brown or orange ground colors, sometimes speckled, and with false eyes on the wings.

List of European Butterflies and Moths

Throughout the range, there are a number of subspecies. The subspecies Eupithecia pusillata interruptofasciata, in eastern North America, is

sometimes treated as a species, *Eupithecia interruptofasciata*.
