Whether to have a second child or not? An integrative approach to women's reproductive decision

The text responses to these questions were analysed qualitatively. Unstructured in-depth or non-scheduled interviews, in particular, allow the researcher to observe how people describe and frame their situation.

Prevalence of child marriage and its impact on fertility outcomes in 34 sub

However, it was clear that many respondents had not thought seriously about routine couples visits previously and had not had the opportunity to think through the details of such a visit. In the following sections, we first highlight open questions in current fertility research and review prior evidence on the economic uncertainty—fertility nexus. Indeed, access to a wide range of effective contraception including LARC-PM is a recognised indicator in the measurement of the quality of family-planning services.

Family dynamics, fertility choices and family policy (FAMDYN)

The transcripts were coded by two of the authors SHM and MC , who have worked together extensively, using NVivo 8.

A reflection on economic uncertainty and fertility in Europe: The Narrative Framework

Verbal informed consent and independent child assent was obtained from all participants. It took the assassination of Dr. Fertility discussions and referrals may not happen when clinicians must navigate the system themselves or when they work in geographic locations where access to fertility preservation options are limited or referral systems were not well established.

Punjabi families in transition: an intergenerational study of fertility and family change

Only 17 out of 33 people invited to participate did so, while the remainder of invitees did not respond to our invitation. The first version had 11
