2 Neuroanatomy and Physiology Relevant to Auditory BrainstemImplants

This may be attributed to a preference of the right ear in right-handed people.

2 Neuroanatomy and Physiology Relevant to Auditory BrainstemImplants

Eustachian Tube The eustachian tube acts as an air pressure equalizer and ventilates the middle ear. Part IX covers binaural interactions and sound localization.

Auditory

These muscles contract to protect the inner ear by reducing the intensity of sound transmission to the inner ear from external sounds and vocal transmission.

Auditory Physiology and Perception

The studies in Part X focus on pathologies, such as the relations between evoked otoacoustic emissions and pure tone audiometry and the effect of short duration acoustic trauma on activity of single neurons in the ventral cochlear nucleus.
