Debunking Evolution

But we do observe that the laws of thermodynamics and in fact the majority of known scientific laws are determined inductively and not deductively. In reality, there are quite a few scientific flaws in the theory that provide reasons to be skeptical.

The Top Ten Scientific Problems with Biological and Chemical Evolution

Note: A PDF of this article can be downloaded. Current Opinion in Cell Biology, Vol.

What Are the Top Ten Problems with Darwinian Evolution?

This was a fortuitously-timed discovery: because the fossil combined bird-like feathers and a wishbone and reptilian teeth, three fingers on hands, and a long bony tail traits, it helped convince many about the veracity of evolutionary theory.

The Top Ten Scientific Problems with Biological and Chemical Evolution

Such orphan genes provide evidence for intelligent design because there is no plausible source for their information.

The Biggest Problems for Evolution

Biology textbooks typically portray the embryos of different groups of vertebrate as starting off development in a highly similar fashion, reflecting their common ancestry. The giraffe's lungs are very large and it breathes slowly, which is necessary in order to exchange the required large volume of air without causing windburn to the giraffe's 12 feet of trachea. Axe, Gauger, and Seelke are by no means the only scientists to observe the rarity of amino acid sequences that yield functional proteins.

Problems with Evolution

This observation raises the question of how humans can be so much more morphologically and behaviorally complex than these other metazoans. But where is the evidence that they evolved at all? This allowed primates to grasp and hold smaller objects other animals were incapable of

grabbing with their forelimbs. Richard John Huggett, Fundamentals of Biogeography, p.

Debunking Evolution

Darwinists today expect the appendix to appear in animals along evolutionary lines of descent. Harold has been studying cell biology for over 50 years. The problems associated with the RNA world hypothesis are well known.

What Are the Top Ten Problems with Darwinian Evolution?

In between, the whole mass is shifting about. Enzymes are long chains of amino acids which fold into a specific, stable, three-dimensional shape in order to function.
