Child and Adolescent Psychiatry and Behavioral Sciences

I am board certified in the treatment of children, adolescents, and general psychiatry, treating patients aged 2 - 65 years. For the remaining three disorders, psychotherapy is recommended as the most effective treatment of choice.

Pediatric Psychiatry

Lots of children have problems that can affect how they feel, think, learn and act. These reasons include a persistent, severe pattern of inattention. Through collaboration with the Center for Pediatric Behavioral Health and the Section of Neuropsychology, the Section of Child and Adolescent Psychiatry offers a full range of psychological services.

Child and Adolescent Psychiatry

This work was influential, especially since the investigators demonstrated specific continuities of psychopathology over time, and the influence of social and contextual factors in children's mental health, in their subsequent re-evaluation of the original cohort of children.

Child and Adolescent Psychiatry

Assessments for young people ages 2 to 22 who have developmental difficulties and consultations with their parents, teachers and care providers.

Child & Adolescent Psychiatry

These meet a wide range of pediatric and adolescent behavioral health needs.

Children's Mental Disorders

In such cases, a senior staff psychiatrist or psychologist will perform the evaluation while being observed by a group of residents or interns. Did you miss your daughter's soccer goal because you stayed in the parking lot opening and closing the car door repeatedly instead of watching her game? However, for several major psychiatric disorders, which shows the degree to which psychiatrists agree on the diagnosis, is generally similar

to those in other medical specialties.
