After applying only 30 mg of the total induction dose of rocuronium, it was learned that the neurological examination should be controlled again from the surgeon because of the controversial of the neurological deficit. This case showed that neuromuscular block can be effectively re-induced by rocuronium following the reversal of rocuronium-induced neuromuscular block with sugammadex. Detailed discussions of treatment plans and commonly used drugs enhance your management of autoimmune disorders, painful neuropathy, dysautonomia, and other neuromuscular disorders.
