ashe metamorphic suite: Topics by Science.gov

In the final crustal density structure, two anomalous bodies B and C with high density and low magnetization could possibly be attributed to metasomatised mantle materials by SiO₂-rich melt derived from the foundering subducted mafic lower crust. It is concluded that shock effects and the sequence of progressively increasing degrees of shock metamorphism are very similar in H, L, and LL groups.

quadrangle alaska final: Topics by Science.gov

The amber was transported into small swamps and was preserved there together with lignite. Alaska's diverse systems for electric power include only 4% by private utilities. Three types of woods, Ulmus Ulmaceae , Leguminosae? Allen 1976 delineated concentric isograds around the gabbro, including +sphene, +tremolite to 1.
