If a person is severely choking, you only have a few seconds to respond before the situation becomes life-threatening.

## First Aid Procedures for Chemical Hazards

The following resources are aimed to provide information and guidance related to the safe management of chemical substances. If irritation, pain, swelling, lacrimation, or photophobia persist, get medical attention as soon as possible.

### First aid for chemicals

It may be necessary to cut the clothes off in some instances to prevent contamination of the eyes. Cuts or wounds in or around the eyes occur easily in connection with eye injuries.

### First aid for chemicals

Also, since oxygen is stored under high pressure, the cylinder can behave like a missile if the valve breaks or the tank is punctured. Prepare Your Home For Earthquakes Unless you live in an area where earthquakes are common, you might not think much about them.

### First aid for chemicals

Map out where the exits are in your home and have an escape plan for every situation.

### First aid for chemical accident

Disclaimer All content published on the blog is for information only. Do research to learn if any fault lines in your area could potentially cause an earthquake in the future. All experiments that give off smoke or noxious gases should be conducted in a well-ventilated fume hood.

## **Guide to First Aid in a Chemical Laboratory**

The typical reaction time in case of a splash in the eye is 1-2 seconds.
