Light attenuation in reach B the lower, fresh to oligohaline tidal river was greater than that in reach A the recently revegetated, upper, freshwater tidal river in both years.

displays potomac river: Topics by Science.gov

Bass collected in the South Branch Potomac moderate to high prevalence of TO had less sperm per testes mass with a lower percentage of those sperm being motile when compared to those from the Gauley River low prevalence of TO. Computed performance is compared with the experimental data from two radial-inflow turbines and with the performance calculated by a previous computer program.
