Canada to spend more than \$6,600 per person on health care in 2017

The CLSA will follow approximately 50,000 Canadian men and women between the ages of 45 and 85 every 3 years for a period of at least 20 years.

Filesize: 32.1010 MB

Canada's aging population will strain the health

Carstairs also called for the government to reach out to seniors and make them aware of financial scams and what to do if they face physical abuse, as well as extend its ParticipACTION program to seniors and advertising walking as an easy, inexpensive and healthy form of exercise. The Institute on Aging officially launched the CLSA study in 2009 to develop a national longitudinal research platform. Efforts to integrate and coordinate services across the continuum of care are complicated by a separate funding authority for physicians who practice autonomously from regional health authorities in their own private practices.

Population Aging and Future Health Costs in Canada on JSTOR

The federal government funds this service. While the timing of this trend is somewhat later for Canada than it is for some northern and western European countries, policy makers in Canada and in many other countries of the Organisation for Economic Co-operation and Development OECD are receiving conflicting messages about what the future growth of the elderly population will mean for the provision of health care services and health care expenditures. Taxation revenue growth in the future is generally expected to be slower than in the past due to the impact of the aging population on economic growth.

2018 Ageing Report: Policy challenges for ageing societies

Please note that corrections may take a couple of weeks to filter through the various RePEc services. From 2011 to 2030, however, the number of elementary school-age children is projected to rise by about 1. The most common visible minorities include Aboriginals 4% , East Asians 4% , and Asians 3.
