The iridescent colors of beetle shells and moth wings are his pigments in a seemingly endless brilliant palette. Jennifer Ward is the author of I Love Dirt! The colors are entirely natural, and to render the reproductions as accurate as possible some have been reproduced with fifth-color metallic inks and highlighted with spot varnish. Beginning with insects and moving on to aquatic life, reptiles, birds, plants, and minerals, Marley has used his skills as a designer, conservator, taxidermist, and environmentally responsible collector to make images and mosaics that produce strong, positive

emotional responses in viewers. Other great artists, such as Jacquelyn McBain, have devoted much of their artistic career to exploring the beauty of insects: in McBain's case she also celebrates the flora on which these insects dwell and survive in paintings rich in observed accuracy and fascinatingly coupled with metaphorical titles and ideas.
