The Mexican

Griffith, David and Edward Kissam. As an extension of the previous study, 55 participants consented to complete additional study phases including completion of an assessment of depressive symptom severity and three additional cortisol sampling sessions in the afternoon and evening designed to test a priori hypotheses to determine the extent to which the CAR compared with 12 hr waking day AUC predicts subclinical symptomatology while controlling for the effects of childhood trauma. Demographic and health variables did not predict symptomatology.

An awakened minority: The Mexican

SOURCE: del Pinal and Singer 1997: p. A Different Mirror: A History of Multicultural America. The prevalence of the Mexican-American population suggests the need for nurses to become more accustomed with Mexican-American culture and values.
