Sheaves can be furthermore generalized to stacks in the sense of Grothendieck, usually with some additional representability conditions, leading to Artin stacks and, even finer, , both often called algebraic stacks.

## Commutative Banach Algebras

For each module algebra  $A$  we denote by  $HMA$  the category whose objects are right  $A$ -modules together with a compatible left  $H$ -module structure. This proves the first assertion.

All conclusions of the next result do not change when the pair  $A, H$  is replaced with  $A \circ p, H \circ p$ . Taqdir Husain, in , 2003 IX Banach Algebras  
Banach algebras form an important subclass of topological algebras because they have a richer structure owing to the norm. We have arrived at a contradiction with the maximality of  $N, X$ .

## THE ISOMORPHISM PROBLEM FOR COMMUTATIVE GROUP ALGEBRAS.

Free products One can form a of  $R$ -algebras in a manner similar to the free product of groups. However, we show that the conjecture may fail if nontrivial idempotents are present in  $R$ .
