Geology, energy and mineral resources of Malaysia and the South East Asian region: Geological Society of Malaysia

The sedimentary rocks have been deposited on a pre-Campanian serpentinite basement and include Cretaceous conglomerate, graywacke, tuff, and limestone; Eocene arkosic sandstone, conglomerate, and limestone; and Miocene limestone and dolomite. This material can be found in GeoLagret.

Geology and mineral resources of the Kuluncak

Geological information for mineral exploration A very important part of SGUs responsibility is to survey and document the geology of Sweden — not least with a view to facilitate mineral exploration. At our Malå office you have access to information on about 20 000 boulders and outcrops, represented by specimens and thin sections.

Geology, energy and mineral resources of Malaysia and the South East Asian region: Geological Society of Malaysia

Our staff at the mineral resources information office will help you access material useful for mineral exploration. UIA reserves the right to block access for abusive use of the Database. These reports give information on surveys made in a special area.
