

Late Cenozoic stratigraphy of the Feather and Yuba Rivers area, California - with a section on soil development in mixed alluvium at Honcut Creek

U.S. G.P.O. - R: Honcut Creek Soil Profile Data

Description: -

-
Soil formation -- California -- Honcut Creek Region.
Geology -- California -- Yuba River Region.
Geology -- California -- Feather River Region.
Geology, Stratigraphic -- Cenozoic.Late Cenozoic stratigraphy of the Feather and Yuba Rivers area, California - with a section on soil development in mixed alluvium at Honcut Creek

-

Grand Salon D Exhibits 8 a.

Staff View: Late Cenozoic stratigraphy of the Feather and Yuba Rivers area, California :

Most if not all of the area now occupied by San Francisco Bay probably stood above. Short Courses and Workshops 1.

Full text of guidebook of the San Francisco Bay counties; history, landscape, geology, fossils, minerals, industry, and routes to

This earlier folding resulted in ~0. Leucogranite veins intruded across augen gneiss banded gneiss contacts share similar fold geometries.

Table of Contents

With few exceptions, the limestones mined in California are meta- morphosed marine sedimentary rocks, most of which are Paleozoic. Some will only last a day.

However, the river from the north car- ried a much larger volume of water and under normal conditions of erosion should have had a lower gradient than the southern tribu- tary. We use variable thermal resetting of fission tracks in detrital zircon from sandstones of the CPW terrane to understand the time-temperature history of these low-grade rocks.

R: Honcut Creek Soil Profile Data

Whether or not a still higher surface is preserved on the raonadnock-like ridges is not certain.
