In Depth

Flares usually stem from the activity of sunspots, cool regions of the photosphere that form and dissipate as the sun's internal magnetic field shifts. The Sun's magnetic field is carried out through the solar system by the solar wind—a stream of electrically charged gas blowing outward from the Sun in all directions.

Earth's Sun: Facts About the Sun's Age, Size and History

The new license permits certain uses, such as personal use and development use, at no cost -- but other uses authorized under prior Oracle Java licenses may no longer be available.

Sun

Like many energy sources, the sun will not last forever.

In Depth

The temperature on the surface of the Sun is closer to 5,600 degrees Celsius. Formation Formation The Sun and the rest of the solar system formed from a giant, rotating cloud of gas and dust called a solar nebula about 4.6 billion years ago. It is the closest thing to a sphere found in nature with only a 6.

Overview

Slowly, this will fade, to enter its final phase as a dim, cool theoretical object sometimes known as a.

Sun Facts
