What Is a Client

The remaining lines contain information about the browser used and the sort of responses it can handle. When a large number of clients send requests to the same server may cause the problem of Traffic congestion.

Top 10 digital strategies and technology trends for insurance executives

Using HTML templates makes it very easy to change the HTML structure, because this only needs to be done in one place, in a single template, and not across potentially thousands of static pages.

What Is a Client

A basic understanding of what a web server is.

What is the difference between client/server and mainframe

The client requests a service to be performed.

NO Client-Server Network Peer-to-Peer Network 1.

Client

Websites created using this style of application push a lot of computational cost from the server to the web browser, and can result in websites that appear to behave a lot more like native apps highly responsive, etc.

General Dynamics Information Technology

In the client-server network, you also need specialized staff to support the servers and the network.

Computer Network

As most website server-side code handles requests and responses in similar ways, this will help you understand what you need to do when writing most of your own code. You may have been using this configuration and not even have known it.
