Environment and Development

Map created by ODT, view more natural resource datasets on.

Environment, Development and Sustainability

One key policy achievement was the imposition of a total logging ban in natural forests in January 1989. For some, the way in which the notion of sustainable development has been redefined so many times and in relation to so many aspects of society—environment relationships undermines its usefulness. There are a number of tools that have been used in Thailand to value the provision of ecosystem services and enable informed decisions to be made about the implications of the environmental impacts.

Environment and natural resources

For more information about the services we offer, feel free to get in touch with us. Not only does watershed protection and rehabilitation reduce erosion and siltation for healthier rivers; it also provides economic and health benefits for the many people who depend on the water source.

Environment, Development and Sustainability

In the process of development, we should fully consider the scarcity and nonrenewability of resources; ensure rational development, utilization, and conservation of resources; improve the cleaner production and environmental self-protection capacities; and improve the utilization rate of environmental resources, to establish a stable ecosystem and realize the development goals. These goals are set to ensure that the future generations are not deprived of the benefits of development and they can utilize the natural resources to satisfy their needs as well.

Environment

Tell us how we're doing.

Environment, Development and Sustainability

These people have only one water source and many needs in order to live.

Environment, Development and Sustainability

Environmental protection is the need to protect the environment, whether the concept of 4 Rs reduce, recycle, recover, and reuse are being achieved or not.
