Coeliac Disease

This is done to look for certain antibodies that are present in the blood of a person with coeliac disease.

Coeliac disease

For coeliac disease testing, the biopsy is taken from the inside lining of the beginning of the gut duodenum during the gastroscopy. Currently, the only treatment for celiac disease is a life-long, strict gluten-free diet leading to improvement in quality of life, ameliorating symptoms, and preventing the occurrence of refractory celiac disease, ulcerative jejunoileitis, and small intestinal adenocarcinoma and lymphoma. Coeliac disease is caused by a reaction of the gut to gluten.

Celiac disease

Whereas, 20% and 25% of all coeliac disease cases with ages of 40—59 were remarked as females and males respectively.

Hematologic manifestations of celiac disease

We recommend folate supplementation in conjunction with a GFD for treatment of these patients.

Intentional and inadvertent non

They showed that individuals with T1DM and CD were at a lower risk of diabetic retinopathy in the first 5 years after CD diagnosis adjusted hazard ratio HR 0.
