Performance analysis is done using different optical filters namely Bessel, Trapezoidal, Gaussian and Fabry Perot optical filters. Combine this with our to obtain a broadband tunable light source.

Analysis and design of optical lowpass multilayer filters via noncommensurate to pseudo-commensurate system transformation

I accept A method has been developed, based on the transformation of a noncommensurate system to a pseudo-commensurate system, to enable the optical lowpass multilayer to be designed and analysed along similar lines as the classical commensurate networks. In fluorescence microscopy, longpass filters are frequently utilized in dichroic mirrors and barrier emission filters.

You can also compare filters using the tool and design and analyze using built in functions. They are wavelength-selective through interference effects at the thin film boundary.
