Does air pollution affect global warming?

NASA currently has several , whose data are used for better understanding of climate and air quality, and for better pollution management. The experiments were designed to isolate DE and IE.

Overview

An explanation is that aerosols impact the cryosphere during the warm season but the associated SAT effect is delayed until winter. Biomass-burning emissions for BC, OC, and SO₂ are based on the Global Fire Emissions Database GFED v1.;

Aerosols and Climate

Such cloud changes provide positive temperature feedbacks; these feedbacks are balanced by negative cloud feedbacks in the polar regions for doubled CO₂.
