How to Build a Model Railroad: 13 Steps (with Pictures)

So the first compromise is often to use just one yard regardless of whether the railroad is single or double track. A solid bottom car with fixed sides and ends, having one or more openings or depressions provided in floor, permitting the lading to be lowered in order to obtain overhead clearance.

If you need to, go back over and drybrush on some white to bring these details out. The layout will be divided in two 6' long sections - depth will vary as the tracks take turns on the layout.

scratch building rolling stock

You also get an over and under action, much longer siding to run longer trains; narrow, long design to give a sense of distance, especially with the long and narrow stretch of the road in the front. You will also get a better feel for developing your technique.

Weathering

Use paint to represent flat surface features, like rivers and roads. The net improvement is probably closer to 50%, assuming the crews can work in concert.
