Manganese and ferroalloys

Manganese and ferroalloys

Although gold, silver, copper, brass and bronze were in common use before iron, it was not until man discovered how to extract iron from its ores, about 1300 BC, that civilization began to develop rapidly. As ore, additional quantities of manganese are used for such nonmetallurgical purposes as plant fertilizers, animal feed, and colorants for brick. It is mostly used in the production of iron and different types of steels.
