Healthier by Design

The resulting technology assessment report will summarize their viewpoints on implementation, performance, financial implications, and lessons learned.

Healthier by Design

Evidence gap map This systematic map shows where big data has been used to evaluate development outcomes across the world.

Strategy use and challenges of ecological design in landscape architecture

Other design details could make offices safer.

Water Technology and Innovation

Partnership 3ie is also a partner of the Geo4Dev initiative, along with CEQA, New Light Technologies, and the Development Impact Evaluation DIME group at the World Bank.

Strategy use and challenges of ecological design in landscape architecture

Eligible high-priority practices include those that address specific causes of ground or surface water impairment relating to excessive nutrients, address the conservation of water to advance drought mitigation and declining aquifers, meet other environmental priorities and priority resource concerns identified in habitat or area restoration plans, or is geographically targeted to address a natural resource concern in a specific watershed. The need for innovation in impact evaluation data sources is driven both by long-term trends and urgent needs While the urgency of COVID-19 pandemic response has prompted the rapid development of new, innovative ways of gathering information on human health, welfare, and development - for description, prediction, and causal attribution - these innovations also address long-term needs in impact evaluation research.

Strategy use and challenges of ecological design in landscape architecture

Survey123 is suited to map trees, birds, weather, historical buildings, or other phenomena on a school campus or nature center.

Centre for Environmental and Agricultural Informatics

Replication is the most established method of research validation in science, yet it has not been fully embraced by the research community or development donors, leading to this gap. These non-traditional sources include remotely sensed data, geospatial data, big data, and others.
