stands at 2.

Family planning in India

Diamond-Smith N, Campbell M, Madan S. The fertility rates in India have dropped rapidly in rural areas, but are dropping at a stable rate in urban and populated areas. Survey information showed that families in the lower wealth quintiles have more children than richer families.

Development administration in a North Indian state : the family planning program in Uttar Pradesh

In 2016, the of India was 2. Ignoring this reality, population controllers continue to espouse a myth that not only makes no economic sense, but literally kills those it targets. A survey of rural men and one of state legislators attempts to measure attitudes toward family planning program methods and workers.

Husbands' Reproductive Health Knowledge, Attitudes, and Behavior in Uttar Pradesh, India on JSTOR

Comparative studies have indicated that increased female literacy is correlated strongly with a decline in fertility. We found that while both awareness of modern contraceptives and desire to space or limit childbearing was high, intent to use them was low and especially low for temporary methods.

India

On average, Muslims across India are poorer than Hindus across India, with an average monthly household per capita expenditure of Rs 833, compared to Rs 888 for Hindus, Rs 1,296 for Christians and Rs 1,498 for Sikhs, according to a 2013 , based on data from 2009-2010.

contributing to FP uptake in UP. We undertook a mixed method approach generating insights from leveraging existing quantitative studies and undertaking new qualitative studies.

A Once and Future Tragedy: India's sterilization campaign 39 years later

The DLFPS data showed that overall general awareness of modern contraceptives, measured as whether the woman had heard of the method, is high among women in UP. It is expected that this would enable women to choose an appropriate method and initiate contraception early in the postpartum period. The total fertility rate of India
