What are the neurological complications of COVID

Symptoms are cyclical; with days to weeks even up to months of suffering interspersed by weeks or months even up to years symptom-free. The disorder is caused by compression of the lateral femoral cutaneous nerve as it exits the pelvis.

Anomic aphasia

Ataxias and Cerebellar or Spinocerebellar Degeneration SCA is a genetic disease with multiple types, each of which could be considered a disease in its own right. Atrial Fibrillation and Stroke Atrial fibrillation is a rapid uncoordinated generation of electrical impulses by the atria of the heart. When hypoxia lasts for longer periods of time, it can cause coma, seizures, and even brain death.

Narcolepsy Fact Sheet

These include optic neuropathy, retinopathy diseases of the retina , dementia, ataxia lack of muscle control , ichthyosis a skin disorder resulting in dry, rough, scaly skin , mental retardation, peripheral neuropathy, and deafness.

List of Neurological Disorders Medications (1 Compared)

Memory problems or confusion Problems speaking, extreme problems with memory, changes in personality, or confusion are all symptoms that could be caused by disorders or problems in the brain, spine, and nerves.

What are the neurological complications of COVID

Conditions that are classed as mental disorders, or learning disabilities and forms of Intellectual disability, are not themselves usually dealt with as neurological disorders. Symptoms are similar to those found in Parkinson disease, such as poor coordination, akinesia an absence of movements , rigidity a resistance to imposed movement , disequilibrium impaired balance ; and limb dystonia abnormal muscle postures.
