## Comportement de *Picea abies* Karst. en plantation au Québec, Canada

At the landscape level, the largest productivity both for timber and energy wood was obtained using rotation lengths of 60 and 80 years with an initial forest landscape structure dominated by older mature stands a right-skewed age-class distribution.

## Comportement de *Picea abies* Karst. en plantation au Québec, Canada

Such thresholds are critical for the unfolding of negative impacts on ecosystems Raudsepp-Hearne et al.

## 2 Fertility Levels, Differentials, and Trends

An advantage of using the TFR over other measures of fertility, such as the crude birth rate, is that it is independent of the age structure of the population.

## Too many wild boar? Modelling fertility control and culling to reduce wild boar numbers in isolated populations

Resilience: the emergence of a perspective for social-ecological systems analyses. The total fertility rate — the number of babies women average over the course of their lives — can be expressed for local, state, regional, even global populations.

Repola J., Hökkä H. et al. (2018) Models for diameter and height growth of Scots pine, Norway spruce and pubescent birch in

## **drained peatland sites in Finland**

Jaakko Repola , Hannu Hökkä, Hannu Salminen Models for diameter and height growth of Scots pine, Norway spruce and pubescent birch in drained peatland sites in Finland , , 2018. The Park allowed mountain pine beetles to follow their natural course in a monitoring zone 74,041 ha , whereas in a management zone 45,997ha an extensive eradication program was established in 2001 which inclu. European Environmental Agency, Copenhagen, Denmark.

## **CO2 Science**

In drained peatland forests, site drainage status, total tree volume, and stand growth are known to be interconnected et al. Thus, the genetic entries in the half-sib trials had a base line of 1. Models for predicting growth and yield in drained peatland stands in Finland Doctoral thesis.
