Protozoa

They do not photosynthesize, rather being chemoheterotrophic like animals. The origin of a new vacuole involves the fusion of many small vacuoles in the cytoplasm.

protozoan

Cause: The disease is caused by the parasite *Giardia lamblia*, a parasite of the duodenum part of the small intestine. They may produce their food photosynthetically, or eat bacteria, yeast and algae.

Protozoa

They may be solitary, colonial, free-living or parasitic. They need to use another cell's structures to reproduce.

Protozoa

The chromatoid bodies are made up of protein and RNA, and till date their function is unknown. The Apicomplexa have a unique arrangement of microtubules, called the apical complex used in the takeover of the host cell, in the cell. They are normally found in the soil and in aquatic habitats.
