**[PDF] Art Therapy and Mindfulness With Survivors of Political Violence: A Qualitative Study**

In addition, as a result of the wide range of studies examining the relationship between multiple varieties of art-related interventions and a similarly large group of

physiological and behavioral outcomes, comparisons both between intervention types and within certain disease states or conditions are challenging. The creative arts intervention promoted short-term well-being in this sample of family caregivers.

## Institute for Arts & Health

Egyptian artists really knew how to utilize the power of street-art, which is precisely why the Egyptian government introduced and heavily enforced anti-vandalism laws akin to the ones established in America. On this basis, the Mayor took actions to promote graffiti and provide the general public with information about graffiti and the decree.

## The Connection Between Art, Healing, and Public Health: A Review of Current Literature

I was a fledgling graffiti writer, only rarely mustering the courage to get up outside of my blackbook.

## Art therapy and political violence : with art, without illusion

It was thrilling to see your own piece from the 7 train, knowing that thousands of other people were seeing it too.

## **The Connection Between Art, Healing, and Public Health: A Review of Current Literature**

Thirty-nine women with stage 1 or stage 2 breast cancer were randomly assigned to an experimental group that took part in an individual creative arts therapy intervention or to a delayed treatment control group. CD4+ lymphocyte counts and HIV viral loads were measured at baseline and at 2 weeks, 3 months, and 6 months after the writing exercise. Because in ancestral times that concept did not exist, it was the community who gave birth to graffiti out of the primal need to communicate.

### **[PDF] Art Therapy and Mindfulness With Survivors of Political Violence: A Qualitative Study**

Uncurated and unsupervised spaces of visual expression are vital for the emergence of socially conscious artwork outside of the rather closed off subculture of street-art. The CD4+ lymphocyte counts of the emotional writing group gradually and continuously increased during the 6-month follow-up, whereas the CD4+ lymphocyte counts of the control writing group increased slightly from baseline levels and then remained stable.
