Japan

That's the general idea behind the levitating house developed by the Japanese company. Courtesy of SANAA The building is conceived as a series of interconnected volumes with sweeping roofs that are smoothly draped over a structure of steel frames. Archaeological findings suggest, however, that improved agricultural techniques—such as the use of iron tools for cultivation and improved techniques for leveling and flooding paddy fields—allowed the Yamato rulers to exercise control over significant manpower resources, both to construct large tombs and to expand the area under their control outward from the Nara plain.

When sensors feel a tremor, they switch on a compressor within a second. There the structure will hover, its inhabitants able to casually go about their business, for the duration of the quake. Paekche was frequently attacked by Koguryō during the century, prompting continued requests for assistance from Yamato; it is recorded that Paekche even sent a crown prince to Yamato as a hostage on one occasion and sent the mother of the king on another.

All this suggests that the 5th-century rulers represent a more military, secular line of leaders in comparison with the priestly kings of the earlier Yamato area. These rulers had access to great power in order to construct their tombs. Rulers there held sway over an expanding portion of the archipelago.

In addition, the region includes the portion of the Ryukyus within prefecture. The island is composed of a complex system of volcanic ranges.

Japan

Three centimeters of levitation will only protect a house from earthquakes that don't rise higher than three centimeters.
