### Racial disparity in infant mortality

On the one hand, calling live births stillbirths should raise the fetal mortality rate disproportionately, yet Japan's fetal mortality rate has long been lower than that of the United States. A nation's internal impact is highly influenced by its position in the global economy and has adverse effects on the survival of children in developing countries. Proceedings of the National Academy of Sciences of the United States of America.

### The Impact of Federal Aid on the Quality of Life: The Case of Infant Health on JSTOR

During 1991-1997, infant mortality continued to decline primarily because of decreases in sudden infant death syndrome SIDS and other causes. Maternal Mortality Maternal mortality rates were highest in this century during 1900-1930 2. Inappropriate and excessive surgical and obstetric interventions e.

### Achievements in Public Health, 1900

It was not until 1951, however, that the Fourth World Health Assembly, the governing body of the WHO, adopted a standard definition of a Live Birth, to wit: A live birth is any product of conception which, after complete expulsion or extraction from its mother, irrespective of the duration of pregnancy, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. More specifically, males are biologically more vulnerable to infections and conditions associated with prematurity and development.

### U.S. Infant Mortality Rate 1950

Indeed, in many countries, collection of birth and death statistics is a responsibility of the police or a central statistical agency. As the 21st century begins, the developed world faces new threats in infectious diseases, with a combination of resurgent old diseases and emergent new ones. Unfortunately, it is reasonable to assume that these statistics underrepresent actual mortality.

### Products

Clearly, a decline in infant deaths was already in progress when the BRA was established. This and earlier reports focused attention on the state of

maternal health and led to calls for action by state medical associations 13. Economic expenditures on labor and delivery and neonatal care are relatively high in the United States.
