Polyethylene terephthalate

In order to reduce the waste from the production, this skeletal waste is traditionally reused in extrusion of new sheets. The rise in consumption of PET for manufacturing bottles or containers, used for wide range of consumable products such as soft drinks, alcoholic beverages, medicines and detergents is expected to boost the packaging industry.

Global Polyethylene Terephthalate Containers Market Insights, Forecast to 2025

HIPS is opaque and provides improved impact properties while maintaining good stiffness. It also may require processing conditions to be adjusted for each pigment type to produce identical parts in different colors.

Japan Polyethylene Terephthalate Containers Market Professional Research Report 2014

Especially in food packaging and containers, clarity is equated with quality and safety, as well as ease of use. It may also be referred to by the brand names Terylene in the UK, Laysan in Russia and the former Soviet Union, and Dacron in the US.
