### Plant Tissue Culture Laboratory (With Diagram)

Usually in vitro propagation is practiced by using three general steps: i preparation and sterilization of plant material, ii culture medium composition, and iii physical environmental conditions in the culture room and culture vessel. Bacteria and especially fungi can rapidly overtake plant tissues and kill them. In order to obtain a higher frequency of fused protoplasts, the mixture may be centrifuged and the pellet re-suspended and incubated for one or more additional cycles.

When taken out of culture the plantlets need time to adjust to more natural environmental conditions. In culture, this proliferation can be maintained more or less indefinitely, provided that the callus is sub-cultured on to fresh medium periodically.
