### GWG

Chronic effects usually require repeated exposure and involve a delay between the first exposure and appearance of adverse health effects. In the case of flammable substances the greatest danger arises from sudden massive escape of volatile liquids or gases. It also studies how in the modern century, a leading petrochemical company complies with its commitment in keeping the workplace and environment safe.

### OSHA efforts to protect workers in the chemical industry.

In this publication, hazards resulting from the mis-identification of chemicals are presented and preventive measures are described. Support will be required from stakeholders such as trade bodies and other Government departments to direct industry - especially SMEs - to the information and guidance they need to achieve this.

### Types of hazardous chemicals

Handling chemical substances without proper protection exposes the worker to the risk of absorbing harmful amounts of chemical through the skin.

### Types of hazardous chemicals

They may have entered into forests and lakes, destroying wildlife and changing the ecosystems.
