Cytotoxic drugs or cytostatics

It soon became obvious that the only effective treatment would be a systemic rather than a topical one and this was realized in 1960 with the introduction of metronidazole — the first effective drug for vaginal trichomoniasis. In the drug-cancer network, the degree number of drugs of the 33 cancer types ranged from one to 40 and the average degree was 7. In addition, nitroimidazoles have other interesting properties, including antitubercular and antifungal activities, in the control of fertility , , as radiosensitisers , , and against the recombinant reverse transcriptase of human immunodeficiency virus HIV -1 , .

Comparative studies on the mechanism of cytotoxic action of novel platinum II complexes with pyrazole ligands

There are, however, effective drugs for preventing and treating adverse side effects. Its application to identify novel drug-cancer associations demonstrated that the data collected in this study is promising to serve as a fundamental for anticancer drug repurposing and development.
