## Outline of biochemistry

Turbulent liquids contain the so-called turbulent eddies, which can be found in various length scales. ELISA allows the detection of an analyte substance whose presence is being quantitatively and qualitatively analyzed in a liquid sample.

## Biochemical Process

Unfortunately, there are no good x-ray lenses, so an image cannot be focussed, and usable x-ray microscopes do not yet exist.

## Outline of biochemistry

Other organisms invariably cause disease in humans, such as obligate intracellular parasites that are able to grow and reproduce only within the cells of other organisms. Therefore, overall, nitrogen isotopic fractionation during the assimilation of nitrate by marine diatoms could be a first-order process with respect to growth rate, influenced by additional factors, such as light intensity, micronutrient, and temperature. Cell Fractionation: This means separating different parts and organelles of a cell so that they can be studied in detail.

## Top 7 Types of Immunochemical Techniques Used in Biochemistry

In this technique, known as immunofluorescence, fluorescent compounds such as fluorescein and rhodamine are in common use, but other highly fluorescent substances are also routinely used, such as phycoerythrin, an intensely coloured and highly fluorescent pigment obtained from algae.
