**PP 7321:2004**

They will give you the training, competency, and accreditation to meet the requirements of this code of practice. For every 5 students, there was one computer.

**BS PP 7321:2004**

Educators and the Evolution of Technology in the Classroom With the evolution of technology, educational capabilities are growing and changing every day. As the world of technology evolves, the learning environment, both on-campus and online, will equally progress, and the need for teachers who are educated in technology and design will continue to grow.

**BS 2917**

They also give you complete access to the training, competency, and accreditation to meet the requirements of this code of practice.

**Standards for schools and colleges**

Technology has always been at the forefront of human education.

**PP 7321:2004**

These standards provide the benchmark for Health and Safety training in Design and Technology. When IBM introduced its first personal computer in 1981, the educational world knew that it was on the verge of greatness. From the days of carving figures on rock walls to today, when most students are equipped with several portable technological devices at any given time, technology continues to push educational capabilities to

new levels.

### **Standard for health and safety for design and technology in schools revised**

The standard also provides information so that individual training needs can be addressed by all those delivering the subject.

### **Health and Safety**

Covers definitions, apparatus, test specimens, conditioning and testing, properties to be tested in accordance with existing British Standards, determination of extension at a specified force, of modules, of tension decay, of residual extension, method for fatiguing, of fatigue set of elastomeric thread breaks, of runback, and ageing specimens.
