Hypericum revolutum

This name is in version 1.

Hypericum

This way, it has in recent years considerably extended its distribution range in Belgium. The late Norman Hadden had it in his garden at Underway near Porlock, Somerset, and Dr Robson tells us that there are flowering specimens from him in the British Museum Herbarium dated 1935 and 1959. Seeds remain viable for two years in laboratory conditions Ivimey-Cook 1963.

Out of these, *Hypericum androsaemum* is extremely rare as a native species and only known from a small, rather disjunct area in Wallonia Saintenoy-Simon 1985. It is perhaps scarce or rare in all of its surviving range.
