The Amabel Group is largely a product of a shallow subtidal environment. The early Middle Devonian Eifelian is represented by the Anherstburg, Lucas, and Dundee formations which pass laterally into the Edgecliff, Nedrow, Moorehouse, and Seneca members of the Onondaga Formation in New York State.

Geologic units in Horry county, South Carolina

Note that the modern sea ice coverage is during the summer months; winter coverage is more extensive. Litopterns and the notoungulates, South American natives, were mostly wiped out, except for the macrauchenids and toxodonts, which managed to survive. Swauk Formation near Cle Elum, WA and several other Eocene sedimentary rock formations across the Pacific Northwest that consist mainly sandstone, along with some coal beds, shale, local conglomerate, and less common volcanic layers such as tuff solidified ash.

Pleistocene Epoch: Humans, Welcome to Earth

Rivers were larger, had a more copious flow, and were. The lowland below the escarpment is underlain by Cambrian and Ordovician strata up to 600 m thick near the western end of Lake Ontario. These bones are not mineralized fossils like most dinosaur remains, but are still bone, sometimes with marrow inside.

Geologic map of the upper Arkansas River valley region, north

Some rivers also expose bones as they meander back and forth across their valleys.
