## Course Notes

From motor design and development to production and distribution, Lincoln Electric has been a leading provider of arc welding solutions, plasma and oxyfuel cutting, robotic welding and cutting systems, and most importantly, brazing and soldering alloys. Because power transferred into the field circuit is much less than power transferred into the armature circuit, AC generators nearly always have the field winding on the rotor and the armature winding on the stator. The rotor current can be the internal current in a permanent magnet PM machine, a current supplied to the rotor through brushes Brushed machine or a current set up in closed rotor windings by a varying magnetic field Induction machine.
