**Fungal infections in the  
immunocompromised host**

Most pathogens have a predictable clinical presentation that differs from that of the normal host. Definitive diagnosis is made by histopathological demonstration of the fungus in tissue or a positive culture from a sterile body site.

## Clinical Approach to Infection in the Compromised Host

Blood Product and Organ Transplant Recipients.

## Fungal infections in the immunocompromised host

Diagnostic Approaches to Suspected *Pneumocystis carinii* Infection. Other Noninfectious Causes of Febrile Pneumonitis Syndrome. Patients with diseases and disorders that decrease B-lymphocyte function are particularly susceptible to meningitis caused by encapsulated bacterial pathogens.

## Central nervous system infections in the compromised host: a diagnostic approach

General Surgical Considerations in the Cardiac Transplant Patient. *J Infect Dis* 166: 986—994, 1992. Host Defenses against Infection in Leukemias and Lymphomas.

## Clinical approach to infection in the compromised host (eBook, 1988) [play.fridaynightfunk.rf.gd]

New York : Plenum Medical Book Co. Alteration of Empirical Therapy after Documentation of Bacterial Infection.

## Clinical approach to infection in the compromised host (Book, 1981) [play.fridaynightfunk.rf.gd]

Viral Hepatitis in the Immunocompromised Host. The clinical approach to the compromised host with CNS infections depends on an analysis of the nature and severity of the host defense defect combined with the clinical syndromic presentation. Other common manifestations of CNS infection include encephalopathy, seizures, or a stroke-like presentation.
