[PDF] An Introduction to Modern

Vehicle Design By Julian Hapian

Thermal Engineering Thermodynamics of combustion Chemical Kinetics of Combustion Steam nozzles and turbines Air compressor Refrigeration and air conditioning This course would help students apply laws, concept and methodologies of thermodynamics Automotive Engines and Subsystems Engine Basic Theory Fuel supply, ignition system Cooling and Lubricating systems Air motion, Combustion and Combustion chambers New Engine Technology This course imparts knowledge on basic fundamentals of automotive engines Automotive Chassis Front axle steering system Drive line study Braking System Suspensions systems This course studies the suspension systems of automobiles.

INTRODUCTION TO AUTOMOBILE ENGINEERING

Three lectures, one lab three hours ; second term Prerequisite s : AUTOTECH 3VD3, ENGTECH 3FE3 and one of ENGTECH 3FE3 or 3MN3, and registration in level IV of the Automotive and Vehicle Engineering Technology program 1 unit s This course requires students to research, design, develop, and implement an independent project and continues as a Technical Report II. The consequences of current technological changes and those of the recent past are explored to illustrate the complexities of technological-societal interrelationships.

Motor Vehicle Mechanic's Textbook

Automotive turbomachines, fluid flow around bodies, lift and drag minimization by proper vehicle design.

INTRODUCTION TO AUTOMOBILE ENGINEERING

The Digitalization of technology was mainly focused more than ever before even the automobile industry seems mostly mechanical. The 600 level course is an undergraduate course with additional work, commonly extra assignments or a project beyond the requirements for the corresponding 400 level course.
