Rethinking Social Change in the Face of Coronavirus

London and New York: Routledge. As a result, practitioners vary considerably in their approaches to capacity building: for some it is as a pure human resources issue, whereas for others is about organisational change and general management. Each of these systems operates according to its own distinct codes, programmes, logic and mode of inclusion.

Rethinking Sustainability In The Middle Of A Pandemic

It builds on these observations to open up new spaces of expertise, which engage all stakeholders through social-scientific intervention.

Information Technology and the Changing Fabric of Organization

First, they suggest that we cannot neatly disentangle processes of knowledge production from those of governance. As with the case of public choice theory, we can also posit a feedback effect, whereby the social and political adjustments generated by the research might in turn further validate the findings.

Science, Technology and Innovation as Social Goods for Development: Rethinking Research Capacity Building from Sen's Capabilities Approach

They require a new mindset to meet their talent needs and to optimize social outcomes.

Rethinking policy 'impact': four models of research

But the research can also be understood as producing a new set of political problems. For example, Lomas and Lavis both underline the importance of achieving shared understandings between researchers and policymakers, arguing that increased interaction between the two groups will improve the use of research in policy.

Rethinking Science, Technology, and Social Change

Do they consider themselves as citizen science projects? It encourages direct innovation with human needs and environmental imperatives in view.

Rethinking Sustainability In The Middle Of A Pandemic

The human rights paradox: Intellectual property rights and rights of access to science. Similar to the previous group of theories, such accounts assume that the wider structures in which actors are located are key to explaining policy outcomes. Here are some organizations that are on the way to implementing SCaaP.

How Technology Can Help Solve Societal Problems

Thus, project rules such as control mechanisms and codes of conduct are ideally a result of negotiation processes within the project. But when the dust settles, the social sector will need to take strategic steps to restore its philanthropic vitality and contribute to a post-COVID social contract. This represents a moral blind spot that masks important questions regarding the economic and political arrangements that help or hinder the scientific divide between rich and poor countries.
