2021 COFI Declaration for Sustainable Fisheries and Aquaculture

Second, these kinds of shared resource management institutions. To this end, CFP decisions are based on the best scientific advice available and apply the precautionary approach, whereby the absence of sufficient scientific information may not be used as a reason for postponing or failing to take steps to conserve species. In addition to the seven existing Advisory Councils below, the new CFP foresees the creation of four new Advisory Councils for the Black Sea, Aquaculture, Markets and Outermost regions.

Managing Fisheries Conflict in the 21st Century: A Role for Regional Management Organizations?

Of the measures linked directly to marine capture fisheries, we classified six as ambiguous, three as capacity enhancing, and two as beneficial. Each relevant measure or article under each funding period was categorized as either capacity enhancing, beneficial, or ambiguous.

International Ocean Governance at the helm!

The trends described support a discussion about the potential future of EU fisheries subsidies in light of the reformed framework for the EMFF and progress towards prohibiting all harmful fisheries subsidies in accordance with international commitments. The implementation of an EAFM requires consistency between science and management. Panel of participants covering a particular subject.

Reform of the European Union's Common Fisheries Policy: Making Fisheries Management Work

Restricting the analysis to the FIFG, EFF, and EMFF represents a conservative approach for three reasons. A systematic review approach was used to identify participatory fisheries management arrangements within the EU. As shown in , this relates to scientific advice received from ICES, but also to advice from the General Fisheries Commission for the Mediterranean and from science committees of RFMOs to which the EU is contracting party.

FAQ

Future fisheries policy — including access to fishing grounds and resources — will fall under the framework of current Brexit negotiations. In addition, ICES provides advice to DG-ENV and EU MS regarding the MSFD, which aims at securing the protection of the marine environment,

setting a goal of achieving good environmental status GES by 2020. To identify ACs constraints in terms of resources, scope and processes.

Do not shoot the messenger: ICES advice for an ecosystem approach to fisheries management in the European Union

The authors express a particular gratitude to the editor and the three reviewers for improving and enriching earlier versions of the article. EFCA also supports the European Commission as requested in evaluation missions to third countries in the framework of the Regulation.
