## Align OPTN Policy with U.S. Public Health Service Guideline, 2020

I am concerned that the significant resources needed to obtain all these negative tests, enter, store, and access the data, and make that data available for surveyors could be better spent advancing the strategic initiative of transplanting more patients in need.

## Organ Donor

Acute injuries most commonly relate to ischemic time prior to transplant. It will impose a burden on the donors, who will have to provide blood for storage, and it seems to violate the protection of living donors and the sanctity of their gift of life. Moreover, in young recipients, there is more consistent vaccination status in recipients 40 years of age and younger.

## Align OPTN Policy with U.S. Public Health Service Guideline, 2020

Hepatitis B vaccination has been recommended for US children and adults for over 20 years and lack of a strong public health commitment in the US has led to low vaccination rates.

## Manual of vascular access, organ donation, and transplantation

It would appear that most transmission events cited to support this change occurred following transplants from donors with risk factors or other viral diseases. Yet, over half of these 175 donors had initial negative results and no risk factors that would indicate an increased risk of an undetected exposure that would support the need for retesting.

## Manual of Vascular Access, Organ Donation, and Transplantation

The Committee sentiment vote was unanimous in favor of strongly support for the proposal. The strategic goal of this policy is to increase the

number of transplants.

### **Organ Donor**

Although organ injury from cold ischemia is minimized by flushing the organs with preservation solution and keeping them on ice, shortening this time is critical for optimal post-operative function.
