terraform the Red Planet.

## Nuke Mars? Here Are Some (Hopefully Better) Alternatives

Proceedings of the National Academy of Sciences. Without a planetary magnetic field, we will be forced to live inside shielded enclosures or radiation suits if we ventured outside.

## Planetary Ecosynthesis

NASA predicts that, based on current emissions rates, temperatures could increase by up to 4.

## Planetary Ecosynthesis

Even at present, its unlikely that bio contamination can be contained and if Martian life exists, measures will be necessary to save samples that could reseed some protected environments on Mars. For those located on the outer edge of their habitable zones, terraforming could be accomplished by introducing greenhouse gases or covering the surface with low albedo material to trigger global warming.
