Introduction to Linear Algebra & Analytic Geometry

Morgan : Review: Frederick S. Woods and Frederick H. Bailey, Analytic Geometry and Calculus

The coordinate of this section we shall call the projective coordinate of P because of its use in projective geometry. We shall also assume that the ratios of the four functions $f_i t$ are not independent of t . This happens for the plane at infinity and for other planes called minimum planes.

Owens : Review: Frederick S. Woods, Higher Geometry. An Introduction to Advanced Methods in Analytic Geometry

Let P_1 and P_2 be two real points with the coordinates x_1, y_1, z_1 and x_2, y_2, z_2 respectively, and let a rectangular parallelepiped be constructed on $P_1 P_2$ as a diagonal, with its edges parallel to the coordinate axes. From this relation we may read off the following dualistic properties: Plane Sphere Any point of the plane. The two ratios are A4 part of the coordinates of any point on a definite line through B and of no point not on this line.
