### Watch 3 Russian Nuclear Submarines Smash Through Arctic Ice at Once

Maki JN, Gruel D, McKinney C, Ravine MA, Morales M, Lee D, Willson R, Copley-Woods D, Valvo M, Goodsall T, McGuire J, Sellar RG, Schaffner JA, Caplinger MA, Shamah JM, Johnson AE, Ansari H, Singh K, Litwin T, Deen R, Culver A, Ruoff N, Petrizzo D, Kessler D, Basset C, Estlin T, Alibay F, Nelessen A, Algermissen S. The potential of remotely piloted aircraft system RPAS photogrammetry to resolve spatial variability of snow depth is evaluated within an alpine catchment of the Pisa Range, New Zealand.

### Mars Phoenix

The river typically freezes by late October or November, starting in the north.

### Koyukuk River (Gates Of The Arctic National Park and Preserve)

These findings provide context for the effect noted by Nolan et al.

### Mars Phoenix

Achieving decimetre-level accuracy for measuring snow depth provides a basis for monitoring seasonal snowpacks and associated processes, especially considering the capacity to provide very high-resolution, spatially continuous measurements across an entire hydrological catchment. Average snow depth was greater for winter, although maximum depths were comparable between winter and spring. At the poles, the interaction between the solid water ice at and just below the surface and the gaseous water vapor in the atmosphere is believed to be critical to the weather and climate of Mars.

### Adventure Travel

Papp is the 13th Gold Ancient Mariner of the Coast Guard, which is an honorary position held by an officer, with the earliest date of qualification as a Cutterman and over ten years of cumulative sea duty. This article discusses relevant physical properties of the regolith at the Mars InSight

landing site as understood prior to landing of the spacecraft.
