## What Is Killing the US Coal Industry?

Importantly though, a recognition that the body count is not the end of the debate in the race to a post-industrial economy is required, affording greater agency to workers and communities in the struggle to shape their futures and in a way that is sensitive to their own histories and experiences of deindustrialization. At present, about 8% of employees have temporary employment contracts, while a significant proportion of personnel come from employment agencies or are students, which increases the flexibility of the company in terms of staffing arrangements. Equally, no changes occurred in the terms and conditions of employment in the company acquired.

## Germany

Belgium and France have concentrated on the reduction of manpower and capacity. It means that the marginal oil fields will no longer be developed, and that the off-shore oil industry will be devastated.

## Deindustrialisation and decline // Notes From Below

For Celebi, the purchase of BAH represented a means of entering the European market. Additional investments will be needed, for example in open-cycle gas turbines or gas engines. The sale, however, has resulted in the modernisation of the MN refinery and the strengthening of the oil sector in Lithuania.

## Europe's last coal mines struggle for lifelines

The coal industry has been unsuccessful only because it has been unlucky over the years. Following the closure of a mine, converting the site to a renewable energy generation facility can provide new job opportunities and economic value, as well as contributing to a more secure energy

supply.

### **The impacts of COVID**

Outcome for company GO has pursued its policy of modernisation and has continued to invest in updating services.
