The New Science of Mind and the Future of Knowledge

The irony is that what seems to block the brain from understanding this is the imagination of self which, if this is right, is the memory of fear motivating the creation of a self-system, which necessitates the need for an imaginary future.

The New Science of Mind and the Future of Knowledge

Explain what happens when one slams a door on one's finger. And yet every member of this fantastic zoo of radiolarian forms is built on exactly the same canonical design. Then there is only the functioning of the body; there is only the activity of the organism and nothing else; then thought functions without identification as the me and the not-me.

When Does Human Life Begin?

Not perfect, but the best. For example, zebrafish that were reared solely with red, blue, green or white food more frequently bit the plastic strips that were the same colour as the food they were reared with compared to strips of other colours Spence and Smith, 2008.

Socrates' Critique of 21st

Unless we are willing to assign personhood proportionate to ability young children, for example, might be only 20 percent human, while people with myopia 95 percent, the limited abilities of prenatal humans are irrelevant to their status as human beings. . Here the information flow follows through the social network.
